

July 26, 2011

Marlene H. Dortch, Secretary
Federal Communications Commission, 4455 12th Street SW
Washington, DC 20554

Dear Ms. Dortch:

As a small business owner who has several pizza stores around Boulder and Denver, I understand a wireless company called LightSquared is currently trying to develop a new 4G-LTE wireless communications and data network. This technology could help Cosmo's Pizza keep in better contact with our customers, and most notably our drivers, and aid other communications functions. I hope that the FCC will support this process and work to expedite the launch of this important new service.

In our business, mobile handheld devices are extremely important. It is essential to Boulder and Colorado's economic competitiveness that we continue to build out our mobile broadband infrastructure. LightSquared would also create jobs at a time when they are sorely needed. It is a privately funded, market-based solution that would bring more mobile broadband communications to more people in Colorado.

I know firemen, emergency medical technicians and other first responders are eager for this kind of technology, which would create a seamless backup in the case of natural disasters, terrorist attacks or other emergencies. I also understand that LightSquared's network would be the first to combine ground-based cells with satellite communications.

I encourage you to please help LightSquared with this process because it is essential to supporting small business and expanding mobile broadband capacity and availability in our state.

Sincerely,

Ryan Shorter
Owner, Cosmo's Pizza, Inc.
